

# Cybersecurity OT&E – Developmental Test Event Example

---

## **Example**

### **3.2.3 Developmental Test Events**

DT and OT participation will be closely integrated throughout IT-B1 to optimize concurrent data collection. XYZ aircraft performance will be examined and all data collected will be available for independent analysis. DT and OT test objectives will be combined into jointly written test plan products that will govern test execution. Data for Cybersecurity, JITC, AIMS, and Electromagnetic and Environmental Effects (E3)/TEMPEST will be gathered that supports assessments and certifications. Data drawn from this integrated test event for OT&E will be reflected in a DOT&E-approved OT&E plan. Data will also be gathered to support S/V and FP determinations. Approximately 150 flight test hours are planned. Supportability T&E, training systems evaluation, Logistics-Demonstration (LOG-Demo), BIT and Maintainability-Demonstrations (M-Demo) will be conducted. Results from IT-B1 will inform OT-B1 and the MS C decision.
