

3.6.3. Test Limitations

- Discuss any test limitations that may significantly affect the ability to assess the system's vulnerability and survivability.
- Also address the impact of these limitations, and resolution approaches.
 - [Test Limitations Guidance and LFT&E Examples](#)

3.7. OTHER CERTIFICATIONS

- Identify key testing prerequisites and entrance criteria, such as required certifications (e.g. DoD Risk Management Framework (RMF), Authorization to Operate, Weapon Systems Explosive Safety Review Board (WSERB), flight certification, etc.)

3.8. FUTURE TEST AND EVALUATION

- Summarize all remaining significant T&E that has not been discussed yet, extending through the system life cycle.
 - Significant T&E is that T&E requiring procurement of test assets or other unique test resources that need to be captured in the Resource section.
 - Significant T&E can also be any additional questions or issues that need to be resolved for future decisions.
- Do not include any T&E in this section that has been previously discussed in this part of the TEMP.

Ensure that the T&E strategy in Part III is consistent with the narrative in Part I, the schedule in Part II, and allocated resources in Part IV. This will require iterative coordination between sub-workgroups and the T&E WIPT.
